CANCER SUPPRESSIVE PREPARATION

GENERAL REMARKS

Nowadays medical treatment of cancer represents a big problem in the whole world. Large pharmaceutical companies, research institutes and a huge number of clinic research institutions all over the world pay the greatest attention to this problem.

The testing of anticancer substances and medicines in the world today is the privilege of the big companies in the developed countries of the world, because of the expensiveness of the researches and due to the extraordinary complicated technology of testing.

However, the inventiveness of our people, people of this climate is known in the whole world. One of these inventive people comes from Novo Selo near Strumica (Republic of Macedonia) M. Sc. IVAN GEORGIJEV, who is studying the medicinal herbs of this climate over 17 years. He is an agronomist and he was engaged with enthusiasm in the discovery of the preparation as auxiliary medicinal means in cure of immune-deficient conditions in the form of the malign diseases and AIDS. At last he has discovered and registered such preparation under the name of VARUMIN. VARUMIN has been tested in the most famous research centres of Europe (London, Geneva, Paris, Raisvik), in Japan and USA.

In the country of origin, in a parent company in Skoplje (Republic of Macedonia), the preparation is registered under the number of 980005/99.

VARUMIN COMPOSITION

The preparation is composed of herb extracts (Inula, Aloe, Cornus, Hypericum, propolis, Achillea). Concentrations of these extracts are pharmaceutically, technologically and biochemically tested and presented in detail in the Certificate.

The liquid consists of the extracts of the following herbs: Viscum Album, Propolis, Aloe.

The second liquid is composed from: Viscum Album, Inula, Calendula officinalis, Cornus mas, Achillea millefolium, Hypericum perforatum and water.

INDICATIONS

VARUMIN is recommended at all malign diseases, at immune-deficient conditions (AIDS), old age etc.

LAST EXPERIENCES IN THE INSTITUTE FOR ONCOLOGY AND RADIOLOGY OF SERBIA

Up to now VARUMIN has been used by several thousands of people all over the world. The application in SFRY (former Yugoslavia) began in 1985. The efficiency has been proved at the cancer of lungs, breast, digestive tract, brain, bones and multiplex scleroses.

By the inspection of the medical documentation of ill persons we observed the significant health improvement at all patients.

Soon it would come to the improvement of general state of health of the patients, pain soothing, improvement of biochemical parameters, the increase of weight and improvement of the functions of ill organs. Also in the oncological institutions it was observed that the basic diseases decreased at the bigger number of the patients.

THE MECHANISM OF EFFECT

VARUMIN acts on a level of the Golgy's apparatus in the cells, stabilizing the vital processes in the cells, slowing down the multiplication of malign cells and by that reducing the tumor mass.

A METHOD OF PREPARATION USE

The preparation is put into two bottles:

1. The content from the first bottle of 50 ml is brought into organism per os all at once.
2. After half an hour from first bottle taking, a patient is taking the content from the second bottle (200mg). The preparation is taken 4 X a day during 5 days.

NUTRITION

During the application of VARUMIN the following food should be avoided: milk, fats, fat cheese, all kinds of red meat, vitamins from B complex, eggs, honey and sweetmeats.

The healthy food is recommended.

CONTRAINDICATIONS AND UNDESIRABLE EFFECTS

Up till now they are not known.

PERSONAL CLINIC OBSERVATIONS

In the Institution for oncology and radiology of Serbia in Belgrade in the period of 10 years (1986/1996) beside the applied classical therapy (surgery, radiotherapy and chemotherapy) a number of female patients on self-initiative have used VARUMIN as an additional form of cure. During this period of time we have been observing a hundred female patients with cancers of different locations:

DIAGNOSIS	NUMBER
Lung cancer	50
Digestive tract cancer	35
Genitals cancer	15
<hr/>	
Total	100

On the basis of the acquired experiences with the supplementary treatment by VARUMIN I have concluded that the preparation has the favourable effects in medical treatment of malign diseases. For example, from 100 of female patients treated by VARUMIN, the general state has been improved faster than with only classic ways of medical treatment.

The side effects are not registered at any of the patients.
Usual undesirable effects during and after the application of radiotherapy and chemotherapy were insignificant or there were not present at all.

CONCLUSION

Based on many year experience with the supplementary (additional) medical treatment by VARUMIN (that the patients have been using on self-initiative together with the classic forms of cure), I think that this preparation has the favourable subjective and objective effects (without unfavourable side effects) and that it can be applied without any therapy risks at oncological and immune-deficient patients.
